

Ad hoc-ness and Monstrousness

Ioannis Votsis

(University of Duesseldorf)

votsis@phil.uni-duesseldorf.de

The aim of this talk is to throw some light on the notion of ad hoc-ness and its value to scientific methodology. In discussing the notion, I focus and attempt to explicate one particular undesirable characteristic associated with it, namely what I dub 'monstrousness'. Roughly speaking, monstrousness reflects the degree to which parts of a hypothesis are unnaturally joined together.
